For F₁ hybrid seed production, A-line and R-line are grown together in 4: 2 ratio in hybrid production block (Fig. 7.1). The arrangement is same except the B-lines have been

substituted by R-lines. At maturity the seeds of A-rows are harvested separately and carefully as these hybrids and also the R-line seeds are harvested for next use.

The use of double-cross hybrids allowed seed producers to take advantage of heterosis in the production of seed of the final cross, which greatly

improved the relatively poor seed yield of an inbred line. The number of double-cross combinations that can be made from a given number of lines can reach astronomical numbers.
