Start studying Histology of Nervous Tissue. Learn vocabulary, terms, and more with flashcards, games, and other study tools.

Histology of Nervous Tissue Flashcards | Quizlet

Peripheral nerves contain a considerable amount of connective tissue. The entire nerve is surrounded by a thick layer of dense connective tissue, the epineurium. Nerve fibres are frequently grouped into distinct bundles, fascicles, within the nerve. The layer of connective tissue surrounding the individual bundles is called perineurium. The perineurium is formed by several layers of flattened cells, which maintain the appropriate microenvironment for the nerve fibres surrounded by them.

Start studying Chapter 15 Review Sheet - Histology of Nervous Tissue. Learn vocabulary, terms, and more with flashcards, games, and other study tools.

Chapter 15 Review Sheet - Histology of Nervous Tissue ...

Nervous or the nerve tissue is the main tissue of our nervous system. It monitors and regulates the functions of the body. Nervous tissue consists of two cells: nerve cells or neurons and glial cells, which helps transmit nerve impulses and also provides nutrients to neurons. Brain, Spinal Cord, and nerves are composed of nervous tissue, they are specialized for being stimulated to transmit stimulus from one to another part of the body rapidly.

Nervous Tissue - Characteristics, Structure, Function

SSB HISTOLOGY Nervous Tissue. SELF-ASSESSMENT QUESTIONS. NOTE: The following questions are designed for introductory drill. They do not necessarily represent the quality of questions which will appear on the Unit evaluation. Set I a. Questions 1-36, Nerve cells, multiple choice. Set I b. Questions 37-81, Nerve cells, true or false.

SSB HISTOLOGY Nervous Tissue SAQ

nucleus. Neuron that conducts impulses away from the CNS to muscles and glands. efferent neuron (motor neuron) Neuron that conducts impulses toward the CNS from the body periphery. afferent neuron (sensory neuron) chemicals related by neurons that stimulate or inhibit mother neurons or effectors. neurotransmitters.

Best Histology of nervous tissue chp 15 Flashcards | Quizlet

Cell body (or perikaryon, soma) – processes and integrates signals from dendrites. Dendrites – branched processes that receive stimuli and conduct impulses toward the cell body. Axon – single axon that conducts nerve impulses to other cells through synapses.
